什么是虚拟孪生 (Virtual Twin)

数字孪生

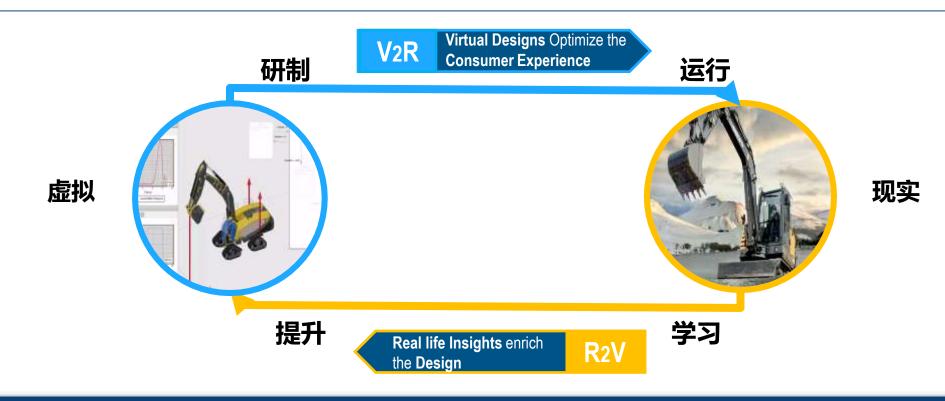

A 'digital representation of a real-world entity or system', 现实世界实体的数字表达 which comes in the form of a 'software object or model 软件对象或模型镜像 that mirrors a unique physical object, process, organization, person or other abstraction.'*

虚拟孪生

A virtual twin represents a product or system as it exists now, but also how it was designed, tested and manufactured in the past, 演进历史 and how it could be operated and maintained in the future 预测未来

虚拟孪生的目的在于更好地改造现实世界

重要意义

虚拟孪生的三要素:数字模型,数据,人的协作

构建虚拟孪生时要考量这三要素
